This application contains claims 5-8 drawn to an invention nonelected with traverse in Paper No. 6. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over the D'Amato patent of record, the Masiero et al. reference of record and the Patierno et al. patent taken together.

The D'Amato patent teaches oral composition of thalifomide being administered to humans (see claim 1, col. 18) at 0.5 to 50mg/ kg/day (col. 13, lines 12-13) or anti-angiogenesis application. The dose for a human of 70 kg could be 35 to 3500 mg, which would include the claimed range of 30 to 1200 mg. The Masiero et al reference teaches

Art Unit: 1614

that thalidomide "in administered orally, and is currently in phase II clin. trails for prostate cancer... and breast cancer "(See AB, lines 18-20). The Patierno et al. patent is cited to show epithelial cell cancers are prostate, breast and liver. (col 8, line 67- col 9, line 3)

The instant claims are directed to treating hepatocellular carcinoma, which is liver cancer. Therefore, one skilled in this art would find ample motivation from the prior art supra to employ the claimed thalidomide for inhibiting any epithelial cell cancer including liver, breast or prostate cancer with a reasonable expectation that said compound would be effective to combat said epithelial cell cancer.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
